Education

Stanford University

M.S. in Civil and Environmental Engineering, Class of 2023

- Concentration: Environmental Data, Statistics, and Modeling

Stanford, CA

Sep 2021 – Present

Ewha Woman's University

B.A. in Environmental Science and Technology

- Concentration: Hydrology and Water Resource and Quality Modeling

Seoul, South Korea

Mar 2016 – Feb 2020

Experience

Build and Publish Personal Multi-Page Responsive Webpage, *Stanford University*

July 2022 – Present

- Constructed the personal website using HTML, CSS, and JavaScript. Adapted the for iPhone, iPad, and other small devices.
- Utilized Tailwind to make website responsive, well-designed, and user-friendly. <https://www.heewon.com>

Prediction of Chlorophyll-a Concentration Using LSTM Model, *Stanford University*

May 2022 – June 2022

- Forecasted Chlorophyll-a concentration with 16 potential impacting factors, using data from 2013 to 2021.
- Utilized DNN, RF, and XGBoost with TensorFlow, and prediction accuracy was R^2 of 0.68, 0.71, 0.66 respectively.

Earthquake Prediction using Transformer Model, *Stanford University*

Mar 2022 – May 2022

- Predicted the magnitude of the earthquake in Japan after the historical earthquake, 2013. Divided data based on fault zones, and maximum magnitude was taken each day. Established and shared model pipeline to facilitate experiments by 3 people.
- Utilized transformer with TensorFlow, the prediction accuracy was R^2 of 0.70.

Climate Change Detection Using Trend and Change Point Detection Methods, *Stanford University*

Jan 2022 – Mar 2022

- Detected the change of trend or change point with p-values under 0.025 using two-sided Mann-Kendall and Cramer von Mises Method of SciPy. Stats for 12 locations based on moderate/wet/dry weathers.
- Five places showed meaningful signs of climate change, wet locations were more fragile to climate change compared with others.

Water Quality Prediction Using Machine Learning Models, *Ewha Womans University*

Feb 2021 – July 2021

- Predicted the concentration of total phosphorus in Euam Lake, South Korea using RF, XGBoost, DNN, and LSTM, TensorFlow.
- Prediction accuracy were R^2 of 0.7643, 0.8124, 0.7666, and 0.8529 respectively. Prediction of summer and autumn with LSTM model outperformed the result of spring. Early to predict phosphorus concentration with machine learning.
- Determined management priority using Gradient Tape and result from LSTM model. Primary factors of TP concentration in Euam Lake were TP concentration from upper water impoundment among 40 potential affecting factors

Publication

Lee, H. W., Kim, M., Son, H. W., Min, B., & Choi, J. H. (2022). Machine-learning-based water quality management of river with serial impoundments in the Republic of Korea. *Journal of Hydrology: Regional Studies*, 41, 101069

Son, H.W., Shim, S. H., Oh, H., & Choi, J. H. (2021). An Assessment of Heavy Metal Contamination in the Nakdong River Around the Weir. *Water*, 13(5), 684

Kang, S. K., Son, H. W., & Kim, D. S. (2019). A Study on the Effect of Temperature on the Precipitation Treatment of Zinc-containing Wastewater by Thermodynamic Estimation. *Journal of Korean Society of Water Science and Technology*, 27(5), 41-50

Awards and Scholarship

Research Assistantship: Tracking and predicting the source of pollutants in a stormwater detention pond *Stanford University*

Best Bachelor's Thesis Award: Most remarkable undergraduate thesis nominated by the faculties *Ewha Womans University*

Best Paper Award: Awarded for remarkable paper and poster, Korea Environmental Dredging Society. *Ewha Womans University*

Deans List: Honored to undergraduate students who proved their remarkable academic ability. *Ewha Womans University*

Skills

Programming: Python (Tensorflow, Keras, PyTorch, Pandas, Numpy, SciKit-Learn), C++, R, Matlab

Other: HTML, CSS, JavaScript, Git, Latex, GIS

Language: Korean (Native), English (Fluent), Japanese (Fluent)
