Education

Stanford University Stanford, CA

M.S. in Civil and Environmental Engineering, Class of 2023

Sep 2021 - Present

• Concentration: Environmental Data, Statistics, and Modeling

• Coursework: Programming Abstraction, C++ Programming Laboratory, Deep Learning, Design and Analysis of Algorithms

Ewha Woman's University

Seoul, South Korea

B.A. in Environmental Science and Technology

Sep 2016 – Feb 2020

• Concentration: Hydrology, Water Resource, and Quality Modeling

Experience

Wiki Racer, Stanford University

Sep 2022 -Present

- Built Wiki-Scaper, parsing website into tokens, and Wiki-ladder, building ladder between one website to another, using C++.
- Provided start and finish words from user, it returns in-between keywords in Wikipedia to end up in finish word from start word.

Personal Responsive Webpage, Stanford University

Jul 2022 - Aug 2022

- Constructed personal website using HTML, CSS, and JavaScript. Adapted for iPhone, iPad, and other small devices.
- Utilized Tailwind to make website responsive, well-designed, and user-friendly. https://www.heewon.info

Machine Learning Models, Chlorophyll-a Concentration Prediction, Stanford University

May 2022 – Jun 2022

- Forecasted Chlorophyll-a concentration in water with 16 potential impacting factors, using data from 2013 to 2021.
- Utilized DNN, RF, SVR, and XGBoost with TensorFlow, and prediction accuracy was R² of 0.68, 0.60, 0.66, respectively.

Transformer Model, Earthquake Prediction in Japan, Stanford University

Mar 2022 – May 2022

- Predicted magnitude of earthquake in Japan after historical earthquake, 2013. Preprocessed data based on fault zones and maximum magnitude was taken each day. Established and shared model pipeline to facilitate experiments by three people.
- Utilized transformer with TensorFlow, prediction accuracy was R² of 0.70.

Trend and Change Point Detection, Climate Change Detection, Stanford University

Sep 2021 – Dec 2021

- Detected change of trend or change point with p-values under 0.025 using two-sided Mann-Kendall and Cramer von Mises Method of SciPy. Stats for 12 locations based on moderate/wet/dry weather.
- Distinguished meaningful signs of climate change in five locations, especially in wet locations.

Machine Learning Models, Water Quality Prediction, Ewha Womans University

Feb 2021 - Jul 2021

- Predicted concentration of total phosphorus in Euiam Lake, South Korea, using RF, XGBoost, DNN, and LSTM from TensorFlow.
- Prediction accuracy were R² of 0.7643, 0.8124, 0.7666, and 0.8529 respectively. Prediction in summer and autumn with LSTM model outperformed result of spring. Early attempt to predict phosphorus concentration with machine learning.
- Determined management priority using Gradient Tape and result from LSTM model. Primary factors of TP concentration in Euiam Lake were TP concentration from upper water impoundment among 40 potential affecting factors.

Skills

- Programming: Python (Tensorflow, Keras, PyTorch, Pandas, Numpy, SciKit-Learn), C++, C#, Java, R, Matlab
- Other: HTML, CSS, TailwindCSS, JavaScript, Node.js, Git, Latex, Graphic Information System Mapping, Photoshop

Publication

Lee, H. W., Kim, M., Son, H. W., Min, B., & Choi, J. H. (2022). Machine-learning-based water quality management of river with serial impoundments in the Republic of Korea. *Journal of Hydrology: Regional Studies*, 41, 101069

Son, H.W., Shim, S. H., Oh, H., & Choi, J. H. (2021). An Assessment of Heavy Metal Contamination in the Nakdong River Around the Weir. *Water*, 13(5), 684

Accomplishment and Recognition

Research Assistantship: Tracking and predicting source of pollutants in a stormwater detention pond. **Best Bachelor's Thesis Award:** Most remarkable undergraduate thesis nominated by faculties. **Best Paper Award:** Awarded for remarkable paper and poster, Korea Environmental Dredging Society. **Deans List:** Honored to undergraduate students who proved their remarkable academic ability.
